Application No. 10/099,895 Docket No.: 03991/000K379-US0

AMENDMENTS TO THE CLAIMS

- 1.-72. (Canceled)
- 73. (Currently amended) A method of regulating inhibiting hematopoietic cell survival emprising consisting of:

targeting a mutation to mutating at least one of the residues of a binding motif eapable of binding a cytoplasmic protein of a GM-CSF/IL-3/IL-5 receptor of a hematopoietic cell, wherein the receptor has a beta-chain having an amino acid sequence according to SEQ ID NO: 1 and the binding motif has the amino acid sequence ⁵⁹⁸HSRSLP⁶⁰³, wherein at least one of the residues of the binding motif is capable of being mutated.

- 74. (Currently amended) A method according to claim 73, wherein a serine or threonine residue eorresponds to a serine residue at position 601 is mutated.
- 75. (Currently amended) A method according to claim 73, wherein at least two (2) amino acids at any position from 598-603 are serine mutated.
- 76. (Previously presented) A method according to claim 73, wherein the hematopoietic cell is a leukocyte.
- 77. (Previously presented) A method according to claim 73, wherein the mutation of the binding motif inhibits phosphorylation of the binding motif.
- 78. (Currently amended) A method according to claim 73, wherein the mutation of the at-least-a serine residue at position 601 is-targeted and mutation of the residue inhibits phosphorylation of the binding motif.
- 79. (Currently amended) A method according to claim 73, wherein <u>mutation of at least two (2)</u>
 <u>amino acids at any position from 598-603 inhibits phosporylation of</u> the binding motif is targeted at residue 601.
